

Adaptive, enjoy learning and comfortable using new languages and technologies. I have a diverse background coming from construction/trade industries which has given me a lot of hands on problem solving experience, an understanding and appreciation for teamwork. Finished the hacktober fest 2020 challenge and got the arctic cold vault achievement. Won a small prize in last falls Chainlink hackathon.

Experience

Wordpress - Spring 2021 I worked for my friend on custom wordpress themes for e commerce sites. Here is an [example](#). I used PHP to create the sites template and a backend dashboard for the client to update maintain the website. Using the design docs provided by the designer.

WebCrawler - A new personal project I began using the m.e.r.n stack. Has a larger goal of creating a unique content generator using text from the internet using NLP and Ai. For now I am simply scraping data and formatting it to be ran through aggregation pipelines and consumed in a web app [Project here](#)

Hackathons - Recently participated in two blockchain oriented hackathons. First was chainlink hackathon where I built an app for users to create, manage and experience their nft's. I leveraged chainlink to automate auctions and create a network reward for users. I used Moralis a web3 sdk to build the front-end, brownie a contract development tool to write, test and deploy my contracts. The project was written in Typescript, Solidity and Python. [Project here](#). Second was the avalanche hackathon which unfortunately I didn't finish due to life circumstances but planned and began implementing a system for deploying and managing common pool resources(CPRSs) on the blockchain. [Project here](#)

MaasDAO – Consulting web3 decisions based on my hackathon experience.

Education

- Studied data structures, algorithms, Big O notation (still) on youtube and websites like leetcode.
- Free code camp Javascript/Data structures and algorithms [certificate](#)
- MongoDB uni [basics](#) [aggregation framework](#) [JS dev](#)
- youtube various lectures
- specific documentation (Language/Library/Framework)
- github repos
- google/forums
- Books on agile development, network protocols, app development, ai, language specifics, etc

A couple of continued education goals of mine are to get my ccip cert, mongoDB expert cert and advance my maths.
